RESEARCH AND INDUSTRY EXPERIENCE

MIT Operations Research Center *September 2019 - Present*
Doctoral Research Assistant *Cambridge, MA, USA*

Theory and Methodology

- Developed a new algorithm for training robust Neural Networks and provided theoretical guarantees for the nonexistence of adversarial attacks.
- Formulated a novel algorithm to solve multistage stochastic optimization problems via sparsification of universal kernels, and proved asymptotic optimality.
- Developed a new methodology to train neural networks that simultaneously optimize for sparsity, robustness and stability.
- Built a flexible representation framework to extract contextual information from tabular structures.
- Co-designed a novel framework for medical prediction tasks by combining multiple data modalities.

Healthcare Applications

- Improved hospital operations resulting in length of stay reduction via patient outcome predictions at Hartford Healthcare and UMass Memorial Center.
- Developed a Machine learning model to identify life-threatening events for early dispatch of Rapid Response Teams at Hartford Healthcare.
- Generated an optimization algorithm for assignment of elective surgeries at Hartford Healthcare.
- Applied multi-modal machine learning algorithms at Brigham And Women's Hospital for early detection of victims of domestic violence.
- Helped designing analytical tools that help decision makers combat the COVID-19 pandemic.

MIT Neuroscience Department *June 2017 - June 2019*
Undergraduate Research Assistant *Cambridge, MA, USA*

- Developed a theoretical analysis to find the sample complexity of different types of neural network (NN) architectures in the problem of finding if an object lies inside or outside a closed path.
- Demonstrated mathematically that state-of-the art NNs can implement solutions for this problem.

Microsoft Research *January 2017 - April 2018*
